Introduction

As a software development student, I am passionate about growing my skills as a developer and I am very eager to work. I have a positive nature and think in solutions. My analytical thinking abilities are strong and make me understand new concepts quickly. I am comfortable working on my own and like to work together.

Education

ROC Mondriaan
Software Development
The Hague
Aug 2021– Current

Over the past two years, I have acquired a significant amount of knowledge, including HTML, CSS, and JavaScript, which I have been actively working with for two years. Additionally, I have gained a lot of experience in PHP and the Symfony framework, which I currently utilize extensively.

I have learned a lot about MySQL and databases. Through my studies, I have not only developed technical skills but also learned how to plan and manage projects effectively by using scrum, writing functional and technical analysis before starting and testing our software regularly leading to successful outcomes.

Experience

Touchfix
Store Employee
Den Haag
Jul 2022 – Dec 2022

As a store employee, I repaired smartphones and provided customer service. I closely worked together with my team to offer customers the best service and solutions. I was also responsible for updating the store's website to keep customers informed about new products and services.

I also gained experience in working within a team, efficiently handling tasks, and supervising others. Through my work experience as a store employee, I have developed a strong understanding of customer needs and can provide solutions quickly for new and different situations.
